

# Brake System

Forklift brake systems wear over time. We want your employees to be safe and not put into any danger, but brake failure is a huge safety issue. Getting the brake system checked is a must.

We look to see if there is any problems and a drivability concern with the brake system. No matter the outcome of the testing we will clean and inspect for damage within the brake system.

- ◆ Test brake actuation and effectiveness.
- ◆ Inspect any red flags the test drive conveyed.
- ◆ Remove drive wheels and clean and adjust brake system.
- ◆ Inspect and repair additional items as needed, per customer approval.
