

Changing the Antifreeze

We want to winterize the engine by changing the antifreeze. This will ensure the engine won't freeze during the winter. Not changing the antifreeze can result in the cooling system leaking and failure, which could lead to total engine failure, which may be impossible to repair.

We look to see if there are any leaks, damage and other problems within the cooling system. We will clean, and refill the coolant with new fluids ensuring the forklift won't freeze during the winter.

- ◆ Flush entire cooling system and refill with new fluid.
- ◆ Inspect for leaks, damages, corrosion and clogs
- ◆ Inspect and repair additional items as needed, per customer approval.
- ◆ Inform customer of inspection, and recommendations
